

Volute Centrifugal-Pumps PN 16/PN 25

for Heat Transfer Media

Thermal Oil up to 400 °C

Hot Water up to 207 °C

ALLHEAT®

Series NTWH/CTWH

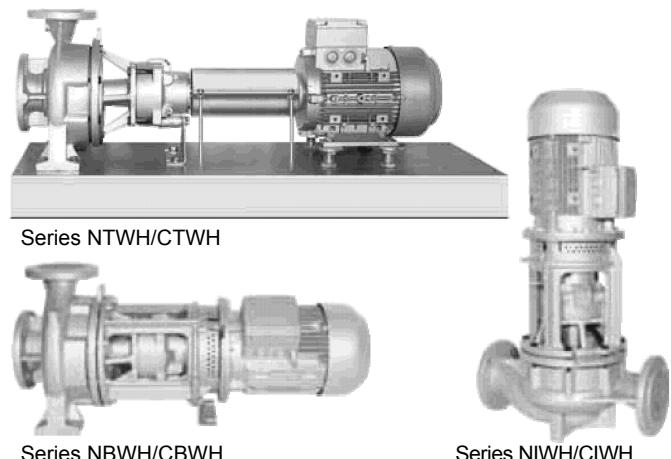

prozess model

Series NBWH/CBWH

block model

Series NIWH/CIWH

in-line model

Application

For circulating heat transfer media such as thermal oil or hot water in heat transfer systems (DIN 4754 and 4752). The media to be pumped may not contain any abrasive constituents or chemically attack the pump material.

Series

The NTWH, NBWH, and NIWH series of pumps are designed for organic and synthetic heat transfer oils up to 350 °C. Series CTWH, CBWH, CIWH can be used up to 400 °C.

The series NTWH, NBWH and NIWH (PN16) can be used with hot water at temperatures of up to 183 °C and series CTWH, CBWH and CIWH (PN25) at temperatures of up to 207 °C. Size CTWH 200-250/81 (ALLHEAT 1000) is approved for pumping heat transfer oils only.

The application limits with regard to temperature, pump series and housing material are specified in the table "Application limits" and in the diagram "Pressure/temperature limits depending on the housing materials".

Design

Series NTWH/CTWH:

Process models of a horizontal volute centrifugal pump. Single-flow, single-stage with optimised bearing support (consisting of housing cover incl. throttle/cooling section and bearing support). Shaft bearing consisting of a silicon carbide or carbon sliding bearing lubricated by the pumped medium on the pump side and a grease-lubricated deep groove ball bearing on the drive side. Volute casing with cast-on pump feet.

Series NBWH/CBWH:

Block model of a volute centrifugal pump. Single-flow, single-stage with optimised bearing support (consisting of housing cover incl. throttle/cooling section and bearing support). Plug-in shaft and motor shaft are rigidly connected to each other. Shaft bearing consisting of a silicon carbide or carbon sliding bearing lubricated by the pumped medium on the pump side and the grease-lubricated deep groove ball bearing of the drive motor. Motors with axial thrust bearings. Spiral casing with cast-on pump feet.

Horizontal or vertical installation, however, not with motor arrangement facing downwards.

Series NIWH/CIWH:

In-line model of volute centrifugal pump, other details as for series NBWH/CBWH.

Shaft sealing

Uncooled, balanced or unbalanced, maintenance-free mechanical seals acc. to DIN EN 12756. The shaft seal is dependent on the direction of rotation.

A safety gland and a subsequent throttle/cooling section are provided upstream of the shaft seal.

Shaft seal

Product code	Material type		Material code DIN EN 12756
U2.11A and U2.13A mechanical seal U3.3A unbalanced mech. seal	Sliding ring	Carbon graphite, antimony impregnated	A*
	Counter ring	SiC, silicone carbide	Q1*
	O-Ring	Rubber fluoride (FPM)	V
	Spring	CrNiMo steel	G
	other design components	CrNiMo steel	G

* U2.13A (ALLHEAT 1000) Sliding ring material, counter ring: SiC-C-Si, material code Q3

Flange

Flange connection dimensions correspond to EN 1092-2, PN 16 or PN 25.

Performance data at 50 Hz

Series	Permissible internal pump pressure ① p [bar]	max. pump output Q [m³/h]	max. pump head H [m]
NTWH		1250	100
NBWH	≤ 16	270	92
NIWH		220	92
CTWH		1450	100
CBWH	≤ 25	240	63
CIWH		105	58

① The entry pressure and pressure during zero flow rate must not exceed the specified values. For permissible values per series, see diagram on page 2.

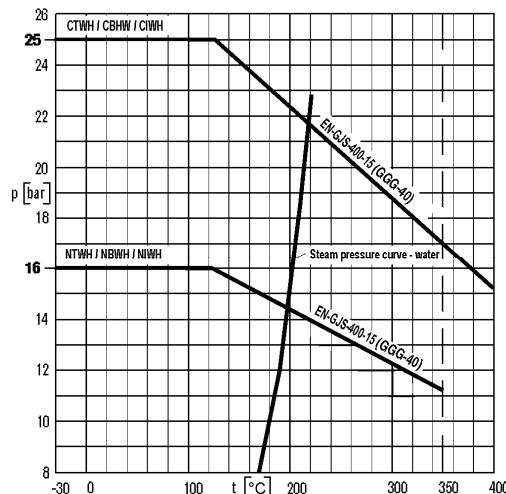

The mentioned performance data are to be considered as a product and performance abstract only. The particular operating limits can be taken from the quotation or order acknowledgement.

Series	Permissible internal pump pressure p ≤ [bar]	Application limits					
		Mechanical seal Bearing type		Permissible suc-tion pressure p ≤ [bar]		Hot water ① t ≤ [°C]	Thermal oil ② t [°C]
		water	oil				
NTWH	16	U3.3A - K1					
NBWH		U2.11A - S1		12	8	183	t = -30 bis +350
NIWH		U3.3A - K1					t = -30 bis +400
CTWH	25	U2.11A - S1	22		15	207	
CBWH		U2.11A - S1					
CIWH		U2.13A - K2	-			-	

① Requirement to hot water quality: Water with low salt content or deionised water acc. to VdTÜV directive 02.89 TCH 1466 solids content ≤ 5mg/l, without settling additives.

② Toxic thermal oils are not hermetically sealed from the environment. In this case we recommend the use of our magnetically coupled pumps.

Pressure and temperature limits depending on housing materials

Application limits

Ambient temperature: min. – 30 °C up to max. +40 °C
Expansion of operating limits upon request.

Materials *

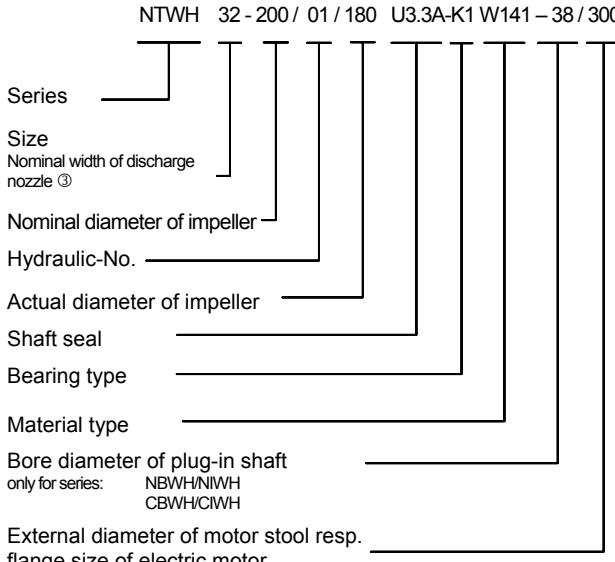

Denomination	Part-No.	Series	
		NTWH	CTWH
NBWH		CBWH

① Material type W143 (ALLHEAT 1000): impeller in EN-GJS-400-15 (GGG-40).

② Volute casing of CTWH 250-315 and 250-400 series in material GS-C25 (W142).

* Other materials available upon request.

Abbreviation

③ For series CIWH ACTUAL width of discharge nozzle

The abbreviation is displayed on the nameplate

Bearing and lubrication

NTWH/CTWH

Pump side: Sliding bearing, lubricated by pumped medium
Drive side: Deep groove ball bearing, grease-lubricated

NBWH/CBWH/NIWH/CIWH

Pump side: Sliding bearing, lubricated by pumped fluid
Drive side: Deep groove ball bearing of drive motor, grease-lubricated

Connections

The following connections are always provided:

FD1	Draining
FD2	Draining
FF2/FV1	Filling/Venting
FF4/FV4	Filling/Venting (only for vertical block and in-line installation)
LO1	Leakage outlet*

* According to DIN 4754 for non-hazardous draining of heat transfer medium leaking from the shaft seal.

Component combinations

The tables on page 5 and 6 show the possible combinations of components for the ALLHEAT sizes.

Due to the modular design, spare parts management is simplified.

Dismantling of insert unit NTWH/CTWH

Where a shaft coupling with a spacer element is used, the insert unit can be removed towards the motor side, whilst the volute casing and the motor may remain on the base plate and the pipes connected to the volute casing.

Dismantling of drive unit NBWH/CBWH/NIWH/CIWH

During dismantling of the drive unit, the volute casing can remain in the pipeline.

Shaft coupling and contact protection

Elastic shaft coupling acc. to DIN 740 with or without spacer element. A coupling protection is supplied as a contact protection acc. to DIN EN 294 (DIN 31001), where the scope of delivery includes a pump, base plate and shaft coupling.

Couplings with spacer element in rotationally flexible, double cardanic design (proper base plate size required).

We recommend the use of double cardanic couplings under the following operating conditions:

- In case of changing temperatures of the pumped medium
- In case of changing ambient temperatures or ventilation
- In case of plants that are sensitive to vibration

When series NTWH and CTWH have impeller diameters 315, 400, and 500 and $t \geq 207$ °C, the double-cardanic coupling is standard. Size CTWH 200-250/81 (ALLHEAT 1000) is available with a double cardanic spacer coupling only.

Base plate series NTWH/CTWH

Two base plate types are available: channel steel, U-profile; and base plates with drip channel made from cast iron or steel, welded (material type depends on size).

The coupling types and base plate versions can be combined with each other.

Use our ALL2CAD interactive system to obtain the installation dimensions.

Accessories

The pump can be equipped with an optional pressureless quench fluid buffer in order to protect the mechanical seal from oxidation with sensitive heat transfer liquids.

Leaks and the bearing can be monitored with ALLWEILER Smart Equipment.

Drive

Surface-cooled IEC three-phase cage motors; model IM B3, protection type IP 55, insulation class F, performances and main dimensions acc. to DIN 42 673.

Attention: Motors provided by the client must generate a cooling airflow in axial direction to the pump side that unimpededly contacts the pump surface. It must also be ensured that any heat can be freely dissipated into the atmosphere.

Block and in-line pumps of series NBWH, CBWH, NIWH, CIWH

Driven by surface-cooled IEC three-phase cage motors with axial thrust bearing, model IM V1, protection type IP55, insulation class F, performances and main dimensions acc. to DIN 42 677.

Attention: Motors provided by the client must contain a axial thrust bearing on the drive side for block or in-line pumps.

Explosion protection

The pump fulfills the requirements according to EU explosion-protection directive 94/9/EC (ATEX 100a) for devices in device class II, category 2 G. Classification into temperature classes according to EN 13463-1 depends on temperature of the pumped liquid. Refer to proposal or order documentation for the maximum permissible temperature of pumped liquid for the respective temperature classes.

Note: When operating the pump in category 2, suitable measures must be provided to prevent impermissible warming of the pump surfaces during disturbance.

Sectional drawing – Series NTHW/CTWH

Pressure-containing casing parts in nodular cast iron for high operational reliability

Wear-resistant casing design

Maintenance-friendly design easy to dismantle, pump housing can be remained in pipework

Solid sliding bearing, lubricated with pumped medium, due to low temperature level, no evaporation of pumped medium in, offering a high bearing force capacity, and long service life, available in SSiC/SSiC or carbon/steel

Optimum temperature reduction, due to long thermal barrier and large surface area of the sealing space, no additional cooling is required

Large sealing area, special design, to prevent the rotation of gas bubbles and partial dry running of the mechanical seal

Additional bearing protection by rotary shaft seal

Optimised antifriction bearing offering exceptional operational reliability and long life

Rigid, robust pump shaft for proper mechanical seal and bearing alignment

Optimised modular system as a result of using identical parts for the process, block and in-line models

Low axial thrust on shaft bearing as a result of hydraulically balanced impellers

Thermal isolation of volute casing is allowed up to this line

Impellers with optimised hydraulics and excellent efficiency

Added operational reliability due to safety stuffing box by a throttle and cooling section

High mechanical stability and strength due to optimum stiffening ribs arrangement

Balanced or unbalanced, maintenance-free standard mechanical seal with chambered O-ring, no additional cooling

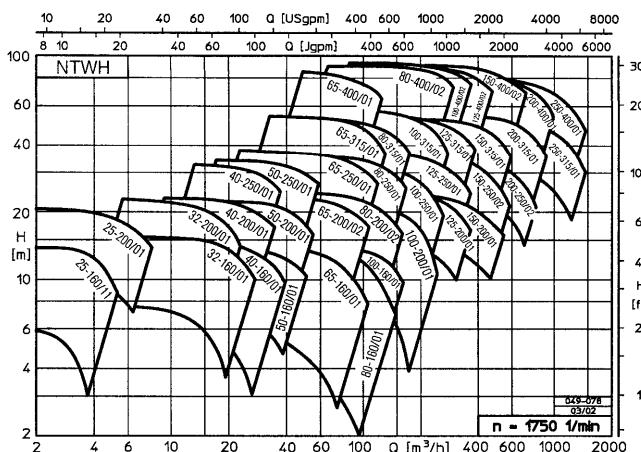

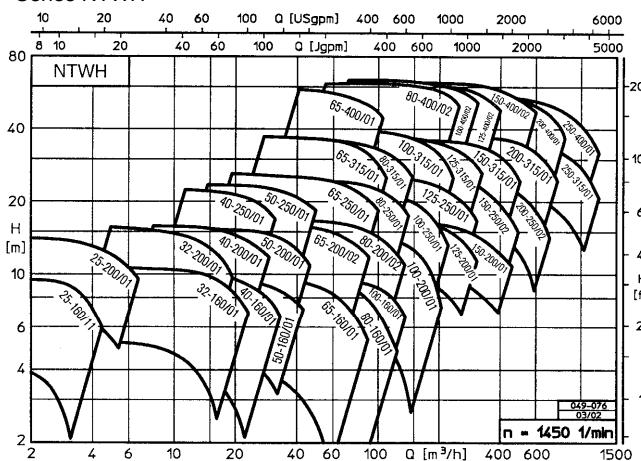

Interchangability of components on bearing bracket sizes 3 up to 5

Parts with the same number are interchangeable within a vertical column.

Connections for horizontal and vertical installation

Unit dimensions - Series NWH

The motor dimensions as indicated are approximate values.
Exact data depend on the motor make.

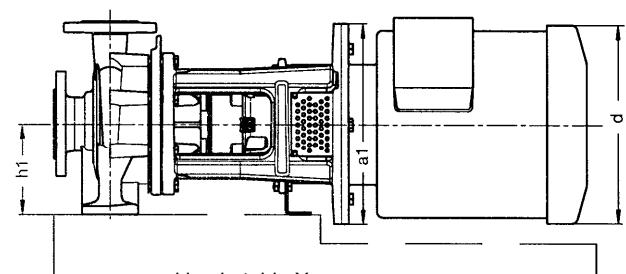

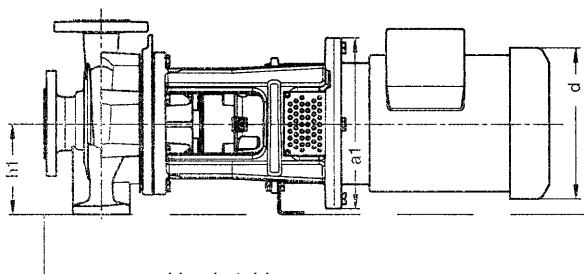

When using special motors, it must be noted that depending upon the enclosure, different performances are allocated to the individual sizes. The main dimensions are changed accordingly.

Attention: Motors provided by the client must also contain a axial thrust bearing on the drive side!
Binding motor dimension information must be submitted with each order.

$$h_1 > \frac{a_1}{2} \text{ or } \frac{d}{2}$$

Base plate and/or foundation design

$$h_1 \leq \frac{a_1}{2} \text{ or } \frac{d}{2}$$

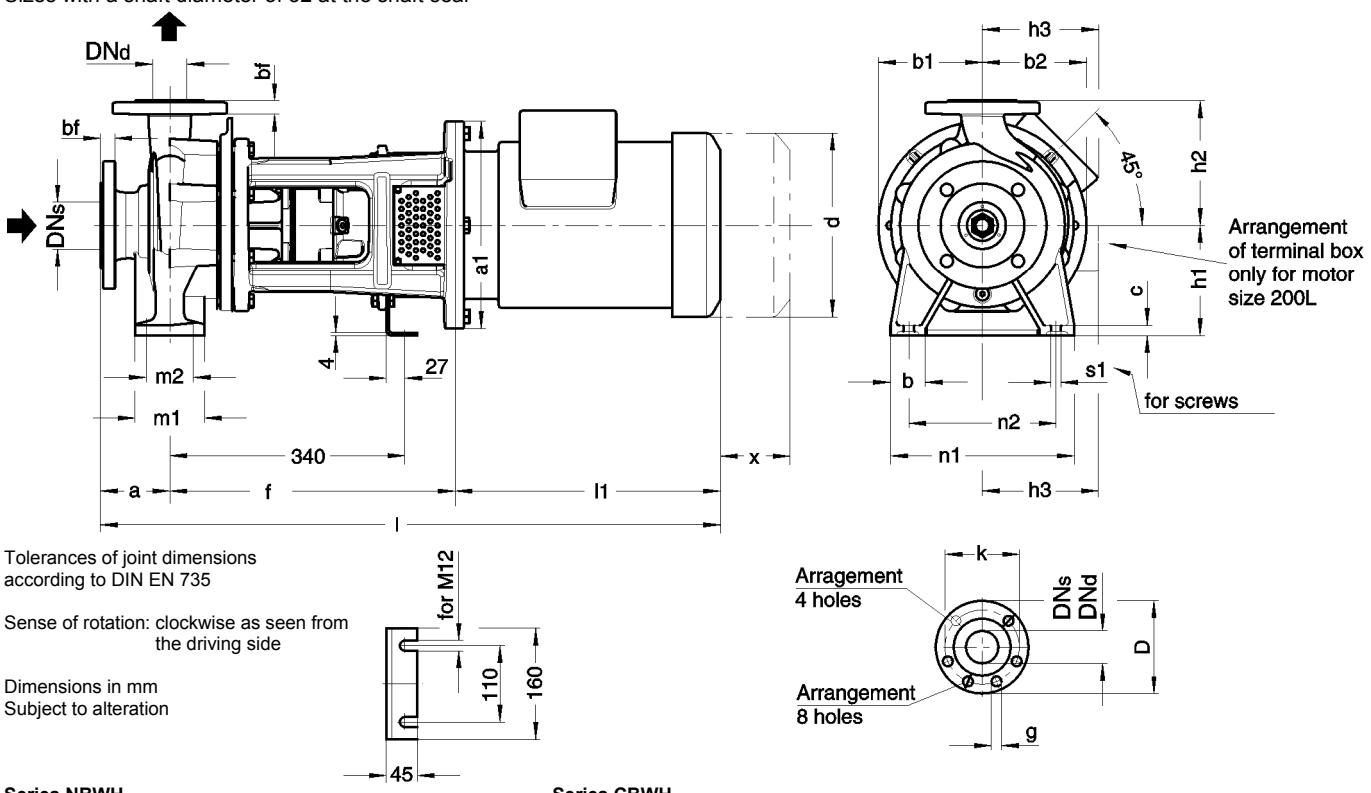

n = 1450 / 1750 1/min

Dimensions in mm
